To actually change management practices

Processes are slow

Q1: What are the greatest obstacles to improving safety in your domain?

Costs

Knowing how to do it

Long time for decision

Project managers not seeing the benefit in preventative measures

lack of proactive riskhandling

Aligned leadership approaches (at all levels)

Correct risk assessments

Leadership

Q1: What are the greatest obstacles to improving safety in your domain?

Leadership and
behaviour based safety

Priorities

Time and people

Navigating complexity

Time

Mgmt focus on
productivitiies etc

Complexity

Competence

Q1: What are the greatest obstacles to improving safety in your domain?

Not understanding
organisational factors

simplifications

Lack of ownership

managers have not
been trained in what
they need to do

KPI-focus

Leadership

Lack of interest in the
mgmt team

Leading Indicators

Q1: What are the greatest obstacles to improving safety in your domain?

The culture to focus on
KPI

Lack of influence on
decision making

Missing Leading
indicators

Time shortage Large
turnover

Management
knowledge

Different Interpretations of
applicable EU directives
and regulations

Supervisors are not serious
enough when it comes to
ensuring that the work
environment is on focus

Learning areas together

Q1: What are the greatest obstacles to improving safety in your domain?

Regulation

The risk assessment is done before the job review

Introduktion and education

Conflicting goals

Old-fashioned EHS people, that isnt helping the top management to look at other things then lagging KPI's

Complexity

Lack of Change Management

Leadership, the need for quick results, not enough incentive for long term commitment

Q1: What are the greatest obstacles to improving safety in your domain?

The established misunderstanding that safety always costs money or slows projects down. Done right, it doesn't. It saves time and money
